

Abstract

An implement for use in removing weeds, moss or other matter from the joints between pavements (P), comprises an elongate
5 handle carrying a blade (12), the blade extending along an axis at an angle of 25° to 65° to the axis of the handle and being formed with an apex at its forward end. The implement is arranged for its handle to be held by a user when standing, with the handle extending forwardly and downwardly
10 from the use and with the apex of the blade engaged in the joint between pavements: the user then draws the implement towards him.
